# shareIT
POWERED BY EGNYTE

Secure File Sharing

Share files from any device with your co-workers, customers, and partners.

Safely sharing files with customers, suppliers and partners can be challenging for many companies. Ideal Networks online file sharing combines the ease of use and flexibility both employees and partners want along with the security, visibility, and control IT needs.

SOLUTION ARCHITECTURE

How it works

File Sync and Share

Hybrid File Server

Cross Site Synchronization

Cloud Tiering/ Archiving

Global Namespace

MAINTAIN VISIBILITY AND CONTROL OVER SHARED FILES

Always know what is happening with company files – Using ShareIT's Smart Reporting & Auditing, users are able to optimize policies and procedures around company security requirements, and gain insights into usage patterns using system-wide analytics.

SECURELY SHARE CONFIDENTIAL FILES

Keep sensitive files secure – Using ShareIT's Storage Connect, users are able to remotely access, edit, and share on-premises confidential documents using password-protected links. Neither the file nor its meta data ever goes through the cloud.

COLLECT IMPORTANT INFORMATION USING UPLOAD LINKS

Seamlessly collect and organize information – Use the upload Link feature to request documents. As each user uploads their file, the files are organized into secure separate per vendor folders. The information in the uploaded files remains confidential, as the users are not able to see what others have uploaded.

SHARE FILES AND COLLABORATE WITH BUSINESS PARTNERS

Secure, easy collaboration –share documents with your clients via a secure email link. Configure the link so that the clients can access, view and download the files from various devices

SHARE FILES FROM A MOBILE DEVICE

Collaborate at any time, from anywhere – Users travel with mobile phone and/or a tablet. With the our mobile app, you are able to access shared company files, in the cloud and on premises regardless of where they are physically stored. Users are able to securely access, edit, and share files or folders from iOS, Android, or Windows Mobile devices.
